

## John A. Guzzo M.D.

Sports Medicine, General Orthopedics Direct Line (219) 250-5009

# **Multidirectional Instability Protocol**

Name	ame								Date						
ProcedureProcedure Date															
Frequency	1	2	3	4	5 times/week	Duration	1	2	3	4	5	6 weeks			

#### **Weeks 0-6:**

- Gunslinger sling (posterior repair) at neutral for 6 weeks
  - o If posterior labral repair; brace at 30° ER
- Gentle isometrics for neuromuscular reeducation in brace, gentle supported Codman exercises
- PROM only for 6 weeks; restrict to 90°FF/20°ER at side/45° Abduction
- May mobilize scapula and gentle grade I-II glenohumeral joint mobilizations if needed
- Posturing, Grip strengthening, elbow ROM, wrist ROM
- After 4 weeks, if patient appears very tight with gentle PROM please contact MD
- If motion returning too quickly, slow down passive stretching

#### Weeks 6-12:

- Sling at night with or without abduction pillow, can discontinue using the sling during the day
- AROM only as tolerated to increase ROM; gentle passive stretching at end ranges as pain allows
- PRECAUTION: no stretching in 90/90 position avoiding anterior capsule stress
- Restrict to 140° FF/ 45° ER at side/ IR to stomach/ 60° Abduction
- Scapular stabilization exercises avoiding anterior capsule stress
- Begin light isometrics for rotator cuff and deltoid, with arm at the side
- Can begin stationary bike

### **Months 3-12:**

- Advance strengthening as tolerated: isometrics  $\Diamond$  bands  $\Diamond$  light weights (1-5 lbs); 8-12 reps/2-3 set per exercise for rotator cuff, deltoid, and scapular stabilizers
- If ROM lacking, increase to full with gentle passive stretching at end ranges
- Begin eccentric motions, plyometrics (ex. Weighted ball toss), and closed chain exercises at 16 weeks
- Begin sports related rehab at 4 ½ months, including advanced conditioning

MMI is usually at 12 months

Modalities PRN
Every patient's therapy progression will vary to a degree depending on many factors. Please use your best clinical judgment on advancing a patient. If other ideas are considered to improve patient's outcome do not hesitate to call.
Patient's recovery is a team approach: Patient, family/friend support, therapist, and

surgeon. Every team member plays an important role in recovery.
