LAKESHORE Bone & Joint Institute

Ryan J. Plank, M.D

Sports Medicine, Work-Related Injuries & Conditions, General Orthopedics, Upper Extremity Direct Line (219) 250-5017

OATS Autograft Protocol

Name								_Da	ate _						
Procedure _															
Procedure 1	Date	e													
Frequency	1	2	3	4	5	times/week	Duration	1	2	3	4	5	6	weeks	

***Range of motion is an important progression of therapy, but limiting swelling is important.

Respecting swelling will decrease pain and improve motion.***

CPM: 2-3x a day for 2 hrs, start 0-40° with \(\frac{5}{10} \) per day as tolerated; goal 100° by 6 wks

	Weight Bearing	Brace	ROM	Therapeutic Exercise
Phase 1 0-6 weeks	NWB	Week 0-1: braced locked in full extension 2-4 weeks: open brace by 20 degrees increments as quad control is gained	Initiate ROM	Gentle patellar mobs, AROM/PROM as tolerated, quad/hamstring sets, 4 way SLR, hamstring stretches, stationary bike for ROM **Monitor Incision **ICE/Elevate for swelling
Phase 2 6-8 weeks	Progress to full WB	None	Achieve ROM of 0-130° over the 2 weeks	ROM: prone hangs, flexinator/ extensionator, PROM, scar mobilization Strength: initiate closed kinetic chain exercises and proprioception exercises (SLS activities) Work on normalizing gait
Phase 3 8-12 weeks	WBAT	None	Full ROM	Continue to focus on quad/hamstring strength with advanced closed kinetic chain exercises Gradually work on return to sports activities closer to end of phase III

Comments	:
